

# SCOPE-2000

This unique instrument can be used just like a conventional microscope but with the added advantage of stageless viewing. The lenses focus at contact and contains built in solid state light sources that automatically give even illumination at the surface to be examined. It's compact hand held design allows viewing and imaging that no conventional microscope would allow. Here is a sample of some of the images obtainable.

Images can be archived to disk, printed or cataloged with available framegrabber hardware and software packages. Here is a range of available lenses:

- 1X - Shows image at macro level.
- 30X-50X Polarizing
- 100-200X
- 750X
